Mobile Device Management

Mobility management platform that helps safeguard mobile devices

IBM® MaaS360® is an easy-to-use mobile device management (MDM) platform that gives you a powerful suite of tools to handle the management and security of all your mobile devices – and all from a single screen. The software supports devices such as iPhone, iPad, Android and Windows Phone.

Features:

- Fast enrollment of mobile devices.
- Send enrollment requests over-the-air using message services, email or a custom URL.
- Initiate individual or bulk device enrollments.
- Integrate with Microsoft Exchange and Office 365, IBM Lotus Notes® and other systems.
- Centralized management.
- Configure email, calendar, contacts, Wi-Fi and VPN profiles.
- Restrict device features such as camera, screen capture, cloud backup and more.
- Blacklist or whitelist specific apps on devices, and create an app catalogue so users can download from a list of pre-approved apps.
- Provide help desk support such as password reset and remote control.
- Register corporate and employee owned (BYOD) devices.
- Set granular security policies for specific devices or persona policies that span across devices.
- Specify passcode policies and encryption settings.
- Detect and restrict jailbroken and rooted devices.
- Locate device using GPS tracking
- Remotely locate, lock and wipe lost or stolen devices.
- Monitor how much data each device is using and apply limits so you can get alerts when it's reached.
- View detailed hardware and software inventory reports.
- Authenticate against Active Directory/LDAP, one-time passcodes or Security Assertion Markup Language (SAML).

Opportunity questioning:

- How do you ensure corporate devices have password protection on them?
- What do you do if you lost a phone, how do you protect the sensitive data?
- How do you give everyone access to corporate applications?
- How would a data protection breach impact your business?
- Do you know what your devices are being used for?
- How do you prevent your employees downloading non-compliant applications to their devices?
- How do you manage your data usage?
- Have you ever had issues with Huge Data usage and/or bill shock ?
- How do you manage your mobile inventories today?
