

Stay cyber secure with us

74% of small and medium businesses had an information security breach in 2015*

Average time to contain a cyber attack is 30 days**

The worst breaches cost over £300,000*

Surprised?

53% of employees use three or more devices for work**

66% of employees use personal devices at work**

80% of employees use unapproved apps at work**

93% of employees admit violating information security policies**

Businesses use so many mobile devices these days. We have solutions to protect them all.

We know what to look for

An employee downloads an app – it looks perfectly safe.

But it's hiding a virus. A hacker now has remote access to their phone.

They activate the microphone to record private meetings

They use the camera to record videos and photograph whiteboard notes

They steal payment details when the phone is used to buy lunch

They capture corporate credit card details used to book travel that afternoon

They target other employees by getting their details from the phone's contacts

They use this data to blackmail, infect or steal from your business

We'll keep you in control

Stop theft before it even begins. Let us help you pick the perfect protection for your business.

We can help with safe-guarding your mobile devices, so that you can:

Work on the go without accidentally downloading malware on mobiles. And manage all your devices in one place online.

Track the data, websites and apps employees can access.

The Mobile Device Management portal allows you to install and track compliance management policies.

Cover all your devices, even your PCs, so you're not paying multiple suppliers.

Knowing your devices are automatically updated with the latest antivirus software.

How can we help?

Impartial

We're not tied to one security provider. So we can find the perfect solution for your business.

Support

We're here 365 days a year, at no extra cost. We'll get you up and running and we'll stay here to support you.

One supplier

Manage, monitor and secure all your devices and data. Just one supplier for it all.

Security

We understand security. We work with O2 who are certified to the Government's Cas(T) formal security standard for mobile and data services.

Mobility

Is at the heart of what we do. We'll help you navigate your way through the security landscape.

Trusted Digital Advisors

Our Trusted Digital Advisors will understand your specific business needs. So you will have the right functionality and capability to secure your business.

No fuss. No hassle. Just secure devices and peace of mind for you and your business.

If you have any queries, please chat to your account manager.

Terms apply to all O2 products and services, see o2.co.uk
